PROFILE

UX researcher focused on two-sided marketplaces, service operations, and trust-and-safety design. Five-plus years turning frontline support data, customer conversations, and operational shorthand into structured insight that engineering and product teams can prioritize against. Track record of identifying stakeholder risk asymmetries and policy gaps that surface only when you've sat with the work — and of designing compliant interventions that respect existing mission constraints. Combines a UX Design degree (B.S., Aug 2026) with hands-on experience in SaaS, healthcare, and shared housing.

SELECTED RESEARCH

Rebalancing Stakeholder Risk in a Two-Sided Marketplace

- Independent policy research at a low-barrier shared housing platform. Mapped risk asymmetries across the member booking lifecycle and produced a fair-housing-vetted toolkit (tiered security model, structured pre-booking screening, listing-disclosure standards) giving hosts a compliant mitigation path within existing platform rules.

Host Enablement Framework & 90-Day Lifecycle Strategy

- Synthesized 60 days of host support ticket patterns into four post-activation friction themes. Designed a layered enablement system — new-host expectations brief, optimization guide, bookings/revenue guide — aligned to a proposed 90-day automated outreach cadence with engineering-implementable success metrics.

Maintenance Response Tier Framework

- Categorized incident severity across two dimensions (risk to life, risk to property) into a four-tier decision tool. Replaced scattered help-center guidance with a single host-facing reference now usable by both hosts and internal support staff for consistent triage.

EXPERIENCE

Host Support Advocate · PadSplit (shared housing marketplace)

Nov 2025 — Present

- Conduct ongoing thematic analysis of host and member support tickets to identify systemic friction patterns. Translate findings into structured research deliverables across enablement, policy, and decision-tool design.
- Partner with engineering to convert qualitative ticket signals into Jira tickets with reproduction steps, query results, and log evidence — improving signal-to-noise ratio between frontline insight and product fixes.
- Built a centralized Temporary Occupancy Tracking system to close compliance and asset-verification gaps during a high-priority internal campaign.
- Designed automated calendar-macro workflow to reduce manual callback scheduling friction and optimize personal resolution capacity.

Application Support Specialist · ImageTrend (healthcare SaaS)

Jan 2024 — Jan 2025

- Managed Tier 2 escalations for healthcare applications, identifying recurring bug patterns across user-reported issues and routing structured findings to engineering through Jira.
- Resolved 40+ daily tickets while exceeding SLA and maintaining high CSAT, treating each ticket as a data point in a larger picture of where the product broke down for users.
- Authored an internal Knowledge Base and SOPs targeting the most common recurring issues, reducing duplicate support tickets by 18% — a measurable signal that the documentation addressed the right user pain points.

- Maintained 100% HIPAA compliance while handling Electronic Health Record data, working within strict privacy and consent constraints that translate directly to research-ethics practice.

Customer Support Associate • H-E-B

Jul 2018 — Dec 2023

- Processed orders, inventory adjustments, and system updates while collaborating cross-functionally to resolve workflow issues and escalate discrepancies.

METHODS & TOOLS

Research Methods Qualitative interviews • thematic analysis • ticket synthesis • journey mapping • persona development • usability testing • A/B testing • survey design • accessibility review (WCAG)

Research & Design Tools Figma • Notion • Airtable • Miro-style affinity mapping • Google Workspace • Zendesk analytics • Jira

Data & Technical SQL • Python (basic) • HTML/CSS • Shopify Liquid • REST API integration • webhooks • Zapier • Bash/Linux CLI

Platforms Zendesk • Salesforce • HubSpot • Freshdesk • ServiceNow • Slack • Mailchimp • Klaviyo

Domain Knowledge Two-sided marketplaces • service operations • customer experience research • post-activation user journeys • churn analysis • fair-housing-compliant research design • HIPAA-compliant research design

EDUCATION & CERTIFICATIONS

B.S. in UX Design

Expected Aug 2026

- Coursework: Human-Centered Design • Systems Analysis • Information Architecture • Data Visualization • Project Management

A.S. in IT Support

Completed Jan 2026

- Micro-certifications in Business Management, Hardware Support, Networking Basics

Certifications Google UX Design Certificate • CompTIA A+ • Cybersecurity Awareness • HIPAA Compliance

Upcoming *Eight-week UX research internship, summer 2026*
